No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

The sequences (AAR43694-98) are subsequences from GT, they provoke T- and B-cell responses in mammals. The can be used to produce a vaccine comprising 2 of these sequences attached to a peptidyl core matrix. They are useful in producing T-cell responses to the GT enzyme causing a reduction of colonisation or accumulation of mutans steptococcal strains in mammals. The vaccines can be used in preventing dental caries. (Updated on 25-MAR-2003 to correct PN field.)

                                            ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            mutans glucosyltransferase (GTF) enzyme. AAW34157 and AAW34158 are from the catalytic domain of GTF, while AAW34160 is from the GTF surface domain. AAW34155 and AAW34159 are from the GTF surface domain. AAW34156 and AAW34159 are from the glucan-binding domain of GTF. These sequences can all be used in the immunogenic composition of the invention. The composition of the invention can alternatively comprise one or more of these sequences linked to a lysine core matrix (see AAW34161-W34165). A composition comprising one of these sequences can be administered to a mammal to raise an immune response, in a method for interfering with the enzymatic activity of streptococcal

Clucosyltransferase in a mammal. The immune response results in reduction of the colonisation or accumulation of mutans streptococcal strains in the glucan-binding activity of the streptococcal glucosyltransferase. The peptides can also be used in vaccines for preventing dental caries in mammals. (Updated on 25-WAR-2003 to correct PF field.)

The peptide can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MAC) class II protein-binding peptide from Streptococcus mutants glucan binding protein-B (GDB) covalently linked with a (preferably catalytic domain) peptide subunit of a streptococcus glucan protein peptide in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multipaltopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GDBB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatiblity complex class II protein.

AAW34161-W34165 represent the Streptomyces mutans glycosyltransferase

(GTF) enzyme immunogenic fragments shown in AAW34156-W34160 linked to a

polylyphane core. AAW34157 and AAW34188 are from the catalyric domain of

GTF, while AAW34160 is from the GTF surface domain. AAW34156 and AAW34159

are from the glucan-binding domain of GTF. These sequences, and the

immunogenic fragments shown in AAW34156 W34160 can all be used in the

immunogenic composition of the invention. A composition comprising one of

these sequences can be administered to a mammal. The immune response

response, in a method for interfering with the enzymatic activity of

streptococcal glucosyltransferase in a mammal. The immune response

results in reduction of the colonisation or accumulation of mutans

streptococcal strains in the mammal. Compositions containing AAW34156

specifically interfere with the glucan-binding activity of the

streptococcal glucosyltransferase. The peptides can also be used in

vaccines for preventing dental caries in mammals. (Updated on 25-MAR-2003
                                                  /note= "the alpha amino acid group of Lys(24) forms a peptide linkage with the carboxyl amino group of Lys(24); the omega amino group of Lys(24) forms a peptide bond with a second Lys residue analogous to Lys(23)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antibody; dental caries; water insoluble glucan synthetase; anti-caries; glucosyl transferase-B; immunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                Immunogenic compositions containing streptococcal glucosyl:transferase peptide(s) - used for provoking immune response to streptococcal glucosyl:transferase for preventing dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                New composition comprising a fragment of a glucan binding protein-B (GpB) that binds to MfC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Glucosyltransferase; GTF; enzyme; immunogen; catalytic domain; vaccine;

an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP136 (FERM P-17567) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetease of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetease of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
                                                                                                                                    Anti-caries agent composed of a monoclonal antibody against an inhibitory enzyme against water insoluble glucan synthetase of glucosyl transferase-B (GTF-B) of Streptococcus mutans.
                                                                                                                                                                                                                         The invention relates to a monoclonal antibody against dental caries and

The invention an isolated protein comprising a glucosyltransferase (GTF) are polypeptide having changes at position from 1480, D6577, D5677 (10147, D4574/D571K/M10147, M1047, D5677/D571K/M10147, M1047, D5677/D571K/M10147, M1047/D571K/M10147, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759B, M1047/D759
                                    Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antibody, dental caries; water insoluble glucan synthetase; anti-caries;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

glucosyltransferase-C (GTF-C). Peptide fragments of GTF-C, especially from the catalytic domain of the polypeptide, can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MHC) class II proteinbinding peptide from S. mutants glucan binding protein-B (GbpB) govalently linked with a peptide fragment of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immuni
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunogenicity; immune stimulation; glucan binding protein-B; microparticle; major histocompatibility complex; tooth disease.

                                                                                                                                                                                                                                                             an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetease of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetease of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
                                                                                                                                                 Anti-caries agent composed of a monoclonal antibody against an inhibitory enzyme against water insoluble glucan synthetase of glucosyl transferase-B (GTF-B) of Streptococcus mutans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    omposition useful as vaccines for dental caries comprises a fragment of glucan binding protein-B binding to a major histocompatibility complex
                                                                                                                                                                                                                                                 The invention relates to a monoclonal antibody against dental caries and

the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthese; transformed with a gene encoding a glucan is produced in the amyloplast and/or vacuole or a maize line officient in starch biosynthese; transformed with a gene encoding a glucan line plant. The method comprises transforming a plant and appare sizing/coating agent). The vector is useful corrected a glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the conditions to produce a regenerated plant and inducing expression of the regenerated plant, where the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and riburophyl AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch require input materials that produce chemical effluents, paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced chemical effluents, paper corrected input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Misc-difference 567

The invention an isolated procesh comprising a glucosyltransferage (GTF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF) (FIF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              require input materials that produce chemical effluents, paper manufacture utilishing the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in
                                                                                                                                                                                                                          Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions.
                                                                                                                                                                                                                                                                                                                                                                                                        invention an isolated protein comprising a glucosyltransferase (GTF)

AAU98040;

The invention an isolated protein comprising a glucosyltransferase (GTF) are polypeptide having changes at position from 1448V, D657V, D567T, K1014T, D457W/D57TK, D567T/D57TK, D567T/D57TK, M1014T, D457W/D57TK, D567T/D57TK, M1014T, M1045TY/D57TK/K779Q/K1014T, Y169A/Y170A/Y171A, and K779Q or a CTF D polypeptide having changes at positions from TF89D, T599E, N471D, M471D/T589D, and N471D/T589E. Also included are a glucan produced by the complementary polymucleotide, at ribonucleic as glucan produced by the complementary polymucleotide, at ribonucleic as glucan produced by the complementary polymucleotide, at ribonucleic as glucan produced by the complementary polymucleotide, at ribonucleic as glucan produced by the vector, a transgenic plant, a paper sizing and/or conting composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, conting composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line glucosyltransferase B or D enzyme, wild-type or mutant and a paper. The glucosyltransferase B or D enzyme, wild-type or mutant and a paper of plant cell with the vector, growing the plant cell under plant growing the glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing the plant cell under plant growing the plant cell under plant growing the plant to produce a regenerated plant and inducing expression of the regenerated plant, where the vector contains a transferming a conditions to produce a regenerated plant to produce a transgenic plant, and atexes in paper manufacture. Unlike prior art rechniques, which and latexes in paper manufacture of produce or the vacuole of sugar beer. Clucans are useful as substitutes for and additions to modifice and latexes in paper manufacture. Unlike prior art techniques, which centric produced input mate ö Gaps

coating composition comprising in transported plant, a begin transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, thermoposition comprising the mutant GTF, wild type or, starch, a latex, continguable store molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucosyltransferase B or D enayme, wild type or mutant and a paper comprising the glucan in a plant. The method comprises transforming a glucosyltransferase B or D enayme, wild type or mutant and a paper comprising the glucan in a plant. The method comprises transforming a plant plant and inducting expression of the conditions to produce a regenerated plant and inducting expression of the polymucleotide for a time sufficient to produce the glucan in the conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the conditions to produce a regenerated plant, where the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chrorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet.

Comprise biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet.

Comprise input materials that produce chemical effluents, paper conjuctant in the input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic sequence is not shown in the specification but was created by the indexer contains the greated by the indexer in the specification but was created by the indexer in the sequence appearing as AAU98027 and the information in indexersion in the sequence appearing as AAU98027 and the present contains and i

Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions.

Claim 36; Page; 44pp; English

The invention an isolated protein comprising a glucosyltransferase (GTF)

E polypeptide having changes at position from 1487N, D567T,

GTF D47D/T599D, and M47D/T599E. Also included are a glucan produced by the complementart, an isolated D407Nucleotide winth encodes P1 or P2, or its encodes P1 or p2, or its encodes P1 or p2, or its encodes P1 or p2, or its encodes P1 or p2, or its encodes P1 or p2, or its encodes P1 or p2, or its encodes P1 or p2, or its encodes P1 or p2, or its encoded or tuber from the transgenic plant caseette, host encoded or tuber from the transgenic plant, a pager staing and/or encoding the expression caseette, nost encoding the encoding the expression or starch, where encoding the plucan is produced in the amyloplast and/or vacuole or a maizelying a glucan in a plant. The method comprises transforming a glucan in a plant. The method comprises transforming a glucan in a plant. The method comprises transforming a comprising but the vector, growing the plant call under plant growing conditions to produce a regenerated plant and inducing expression of the encoditions to produce a regenerated plant and inducing expression of the encoditions to produce a regenerated plant and additions to produce a regenerated plant and inducing expension of the encoditions are useful as substitutes for and additions to moditions are useful as properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GFF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic using the GTFB sequence appearing as AAU98027 and the information in claim 36 %XCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCX

A;Title: Peptide sequences for sucrose splitting and glucan binding within Streptococcus
A;Reference number: A38175; MUID:9112327; PMID:1704006
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 8
A45866
Gextransucrase (EC 2.4.1.5) precursor - Streptococcus mutans
Gextransucrase (EC 2.4.1.5) precursor - Streptococcus mutans
Gispecies: Streptococcus mutans
Cibate: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 15-Mar-2004
CiAccession: A45866

J. Bacteriol. 169:4271-4278(1987).

-!- FUNCTION: Production of extracellular glucans, that are thought to play a key role in the development of the dental plaque because of their ability to adhere to smooth surfaces and mediate the aggregation of bacterial cells and food debris.

-!- CATALYTIC ACTIVITY: Surcrose + (1.6-alpha-D-glucosyl)(n) = D-fructose + (1.6-alpha-D-glucosyl)(n+1).

-!- SUBCELLULAR LOCATION: Secreted.
-!- MISCELLANBOUS: GTF-I synthesizes water-insoluble glucans (alpha 1,3-linked glucose and some 1,6 linkages), GTF-S synthesizes water-soluble glucans (alpha 1,6-glucose). GTF-SI synthesizes both
                                                                                                                               Ferretti J.J., Gilpin M.L., Russell R.R.B.; "Nucleotide sequence of a glucosyltransferase gene from Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

39 1597 Glucosyltransferase-I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 1597;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                forms of glucans.
SIMILARITY: Belongs to the glycosyl hydrolase 70 family.
SIMILARITY: Contains 19 cell wall binding repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Catalytic (appróximate).
1.25 A, 2 B and 5 AC repeats.
Glucan-binding (appróximate).

                              Infect. Immun. 58:2452-2458(1990).

-!- FUNCTION: Production of extracellular glucans, that are thought play a key role in the development of the dental plaque because their ability to adhere to smooth surfaces and mediate the aggregation of bacterial cells and food debris.

-!- CATALYTIC ACTIVITY: Sucrose + (1.6-alpha-D-glucosyl)(n+1).

-!- FINCTORE REGULATION: Glucan synthesis by GTF-S is independent of primer glucan unlike GTF-I.

-!- MISCELLANBOUS: Synthesizes water-soluble glucans (alpha 1,6-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EMBL; M30943; AAA26898.1; -; Genomic_DNA.
